

EXPERIENCE

AI Engineer II <i>American Express (Contract)</i>	Phoenix, AZ February 2026 – Present
● Agentic AI & Platform Engineering: - Built the team’s first end-to-end agentic AI systems: an MCP server, LLM agents, and a control plane. - Built KYC extraction assembling structured profiles for onboarding, \$1M+ projected annual savings. - Shipped a cross-repo coding agent that resolves vulnerabilities across team services, 1k+ resolved to date. - Shipped document-processing features end-to-end (filtering, audit logging, multi-format ingestion, PII detection/redaction) on a production platform processing 70k+ documents/day of sensitive financial data.	
Co-Founder & CTO <i>Notum</i>	Phoenix, AZ December 2025 - Present
● AI Knowledge Platform for Law Firms: - Built a ReAct retrieval agent over a Neo4j knowledge graph and vector index, served via streaming SSE. - Architected a multi-tenant FastAPI backend on ECS Fargate with schema-per-tenant PostgreSQL isolation. - Engineered an async ingestion pipeline (SQS + Lambda) with hybrid OCR at 100k+ documents/run. - Owned security: WorkOS SSO, VPC isolation, rate limiting, 253 OWASP ASVS Level 2 requirements. - Built a five-agent spec-to-PR pipeline with a human merge gate, 100+ tickets resolved.	
Co-Founder <i>Scout</i>	Phoenix, AZ January 2025 - December 2025
● Browser Automation Agent: - Built an agent on a LangGraph plan-execute loop, driving Playwright from cleaned DOM snapshots. - Cut repeat-site LLM calls by 90% by replaying cached action chains keyed to page-state snapshots. - Exposed a FastAPI job API with concurrency-capped workers, human-in-the-loop recovery, and PostgreSQL state.	
Graduate Researcher <i>School of Computing and Augmented Intelligence, ASU</i>	Tempe, AZ August 2023 - May 2025
● Adversarial Robustness of Classifiers Using Implicit Neural Representations: - Engineered adversarial-attack modules for INR classifier pipelines, identifying and patching key vulnerabilities. - Built a gradient-approximating surrogate model to craft image-space attacks and benchmark defenses.	
Software Engineer (Intern) <i>Choice Hotels International</i>	Tempe, AZ May 2023 - December 2023
● Cross-Platform Ticket Synchronization between ServiceNow and Jira: - Engineered a bidirectional sync system between ServiceNow and Jira, processing 300+ tickets/day with webhook ingestion, payload normalization, and conflict resolution, cutting resolution time from weeks to days.	

PROJECTS

Real-Time Chat Service	Go · NATS · MongoDB · Docker
● Built a horizontally scalable chat backend on Go WebSockets and NATS pub/sub, 5,000 msg/s at 99.9% delivery. ● Architected stateless nodes with MongoDB persistence and a Chi router for seamless horizontal scaling. ● Implemented WebSocket protocol with real-time typing indicators, read receipts, and cursor-based message pagination APIs.	
URL Shortener	Go · gRPC · AWS · Redis · Docker · PostgreSQL
● Designed a high-throughput URL shortener with gRPC, Redis cache, and PostgreSQL storage; containerized with Docker. ● Load-tested to 5k req/s at <150 ms p95 latency while maintaining 99.99% success rate. ● Implemented CI/CD with GitHub Actions and Terraform, enabling one-click rollout to AWS.	

SKILLS

Languages: Python, Go, C++, Java, JavaScript, TypeScript, Bash, SQL	
AI / Agents: LangGraph, MCP (client & server), Multi-Agent Orchestration, RAG, GraphRAG, Vector Databases, PyTorch	
Frameworks / Infra: FastAPI, Node.js, gRPC, REST, WebSockets, Docker, Kubernetes, Terraform, GitHub Actions, Playwright	
Cloud / DevOps: AWS (ECS, ECR, SQS, RDS, ElastiCache, S3, Cognito, IAM), CI/CD, Git	
Data / Reliability: Redis, PostgreSQL, MongoDB, Neo4j, Prometheus, Grafana, k6, Postman	

EDUCATION

M.S. Computer Science - Arizona State University - 3.8 GPA	May 2025
B.S. Computer Science - Arizona State University - 3.47 GPA	Dec 2023
