

EXPERIENCE

AI Engineer II <i>American Express (Contract)</i>	Phoenix, AZ February 2026 – Present
● Agentic AI & Platform Engineering: - Designed and built the team’s first end-to-end agentic AI systems: an MCP server, multiple LLM agents and workflows, and an agent control plane for orchestration. - Shipped document-processing features end-to-end (filtering, audit logging, multi-format ingestion, PII detection/redaction) on a production platform processing 70k+ documents/day of sensitive financial data.	
Co-Founder & CTO <i>Notum</i>	Phoenix, AZ December 2025 - Present
● AI Knowledge Platform for Law Firms: - Built a ReAct retrieval agent over a Neo4j knowledge graph and vector index, served via streaming SSE. - Architected a multi-tenant FastAPI backend on ECS Fargate with schema-per-tenant PostgreSQL isolation. - Engineered an async ingestion pipeline (SQS + Lambda) with hybrid OCR, processing 10k+ documents per run. - Owned security end-to-end: WorkOS SSO, VPC isolation, rate limiting, OWASP ASVS Level 2 compliance.	
Co-Founder <i>Scout</i>	Phoenix, AZ January 2025 - December 2025
● Browser Automation Agent: - Built an LLM agent on a LangGraph plan-execute loop, driving Selenium from cleaned DOM snapshots. - Cut repeat-site LLM calls by 90% by replaying cached action chains keyed to page-state snapshots. - Exposed a FastAPI job API with concurrency-capped workers, human-in-the-loop recovery, and PostgreSQL state.	
Graduate Researcher <i>School of Computing and Augmented Intelligence, ASU</i>	Tempe, AZ August 2023 - May 2025
● Adversarial Robustness of Classifiers Using Implicit Neural Representations: - Engineered adversarial-attack modules for INR classifier pipelines, identifying and patching key vulnerabilities. - Built a gradient-approximating surrogate model to craft image-space attacks and benchmark defenses.	
Software Engineer (Intern) <i>Choice Hotels International</i>	Tempe, AZ May 2023 - December 2023
● Cross-Platform Ticket Synchronization between ServiceNow and Jira: - Engineered a bidirectional sync system between ServiceNow and Jira, processing 300+ tickets/day with webhook ingestion, payload normalization, and conflict resolution, cutting resolution time from weeks to days.	

PROJECTS

Real-Time Chat Service	Go · NATS · MongoDB · Docker
● Built a horizontally scalable real-time chat backend using Go WebSockets and NATS pub/sub, supporting 1:1 and group conversations with JWT authentication and achieving 5,000 messages/second at 99.9% delivery rate. ● Architected stateless backend nodes with MongoDB persistence and Chi router, enabling seamless horizontal scaling for concurrent user sessions. ● Implemented WebSocket protocol with real-time typing indicators, read receipts, and cursor-based message pagination APIs.	
URL Shortener	Go · gRPC · AWS · Redis · Docker · PostgreSQL
● Designed a high-throughput URL shortener with gRPC, Redis cache, and PostgreSQL storage; containerized with Docker. ● Load-tested to 5k req/s at <150 ms p95 latency while maintaining 99.99% success rate. ● Implemented CI/CD with GitHub Actions and Terraform, enabling one-click rollout to AWS.	

SKILLS

Languages: Python, Go, C++, Java, Bash, SQL	
Frameworks / Infra: FastAPI, gRPC, REST, WebSockets, Docker, Kubernetes, Terraform, GitHub Actions	
Cloud / DevOps: AWS (ECS, ECR, SQS, RDS, ElastiCache, S3, Cognito, IAM), CI/CD, Git	
Data / Reliability: Redis, PostgreSQL, MongoDB, Neo4j, Prometheus, Grafana, k6, Postman	

EDUCATION

M.S. Computer Science - Arizona State University - 3.8 GPA	May 2025
B.S. Computer Science - Arizona State University - 3.47 GPA	Dec 2023
